Report Overview

Nanotubes as Transparent Conductors refer to the Nanotubes which can use to produce the Transparent Conductors. Nanotubes use for Transparent Conductors mostly refer to transparent conductive films.

At present, the nanotubes use for transparent conductors is still in the developing stage, the world's large production are mainly concentrated in USA. The technology and market share is monopolized by US manufacturers. Many manufacturers are in the research level and begin to mass production in 2012. CNTs-TCF are considered a viable replacement for ITO transparent conductors in some applications. Fabricated as transparent conductive films (TCF), nanotubes can potentially be used as a highly conductive, transparent and cost efficient alternative in flexible displays and touch screens.
