Report Overview

Carbon paper is an economical reprographic medium that aids in copying documents simultaneously with the originals such as in legal documents, credit card or ATM transaction receipts, letters, manuscripts or other forms. Primary customers for carbon paper and inked ribbons products include individual consumers, and small-scale business establishments like repair shops, eateries, apparel retail stores, which continue to utilize one-time carbon paper in conjunction with their business forms. Emerging automation in business processes, the advent of photocopier machine, NCR, laser printers, voice-recognition systems and word processors, together with the inability of carbon paper to produce multiple copies hampered the growth of carbon paper during the past few decades. Laser printers, copying machines, and carbonless paper, utilize a chemical process to produce multiple copies thus eliminating the need for carbon paper. On the positive side, carbon paper is still the cheapest way to produce multiple copies. Although, the outlook for carbon paper in the near future indicate a continued sluggishness, the market will nevertheless continue to exist even into the future, albeit small and characterized by sedate growth.
