Abstracts

Carbon Steel Elevator Bucket is a key component used in the elevator equipment. It is made of carbon steel. Carbon steel has a certain strength and hardness, which can ensure that the bucket is not easily deformed or damaged under the weight and impact force of materials during long - term use. This kind of bucket is usually installed on the chain or belt of the elevator and moves cyclically as the elevator operates. Its function is to scoop up materials in the material loading area, then lift the materials to a specified height with the upward movement of the elevator, and finally pour out the materials in the unloading area, realizing the vertical transportation of materials. The carbon steel bucket of the elevator is widely used in many industries such as grain, chemical engineering, and mining, and can efficiently complete the lifting operations of various granular and powdery materials. It is an indispensable material - carrying and conveying tool in the elevator system.

The global Carbon Steel Elevator Bucket market size was estimated at USD 137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
