The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Steel Flux Cored Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carbon steel flux-cored welding wire is a tubular welding wire with a flux core wrapped in a low-carbon steel outer sheath. Gas-slag combined protection is achieved by filling a flux with specific ingredients, and welding is completed under the protection of CO₂ or mixed gas. It is widely used in building steel structures, machinery manufacturing, shipbuilding and pipeline engineering and other fields. Its advantages include high deposition efficiency (30%-50% higher than solid welding wire), excellent anti-pore performance and beautiful forming. In 2024, the global carbon steel flux-cored welding wire market size is expected to be approximately US\$800 million to US\$1 billion, mainly driven by accelerated infrastructure investment in emerging economies, manufacturing equipment upgrades and the promotion of green welding processes. China's market share is about 30%-35%. Benefiting from the "14th Five-Year Plan" high-end equipment policy and the expansion of the new energy industry chain, the compound growth rate is expected to remain at 6%-8% in the next three years.

The global Carbon Steel Flux Cored Wire market size was estimated at USD 903.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
