The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Storage Transport Pipeline competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carbon Storage Transport Pipelines, often referred to as CO₂ pipelines, are specialized pipeline systems used to transport captured carbon dioxide from emission sources such as power plants, industrial facilities, or direct air capture units to long-term storage sites or utilization facilities. These pipelines are a critical component of Carbon Capture, Utilization, and Storage (CCUS) infrastructure, enabling the movement of CO₂ in either gaseous or supercritical form under high pressure. They are designed to ensure safety, durability, and efficiency, often made from carbon steel and equipped with corrosion-resistant linings and monitoring systems. In 2024, global Carbon Storage Transport Pipeline production reached approximately 136.6 K Tons, with an average global market price of around US\$ 5000 per ton.

The global Carbon Storage Transport Pipeline market size was estimated at USD 684.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
