Report Overview

Carbon tetrachloride is a sweet smelling colorless liquid, also known by other names such as tetra chloromethane and carbon tet. Carbon tetrachloride is a vital chemical which was introduced by a French chemist in 1839 and has been an important inorganic chemical since. It is manufactured commercially as a by-product of chlorination of methane. It is synthesized during the manufacturing of other chloromethane products such as dichloromethane. Carbon tetra chloride molecules contains only one carbon atom which is surrounded by four chloride atoms. It is tetrahedral in shape and is highly symmetrical. Tetra chloromethane is a non polar compound similar to methane gas. Carbon tetrachloride is a very good solvent. Being a non polar compound, it readily dissolves other non polar compounds such as oil, fat and iodine.
