## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbonized Polyimide Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carbonized polyimide film is a special functional material produced by carbonizing polyimide film through high-temperature pyrolysis. After heat treatment at temperatures above 1000° in an inert atmosphere, it forms a carbon backbone structure, possessing high carbon content, excellent thermal conductivity, electrical conductivity, and high-temperature stability. Upstream suppliers include polyimide monomer and resin suppliers, basic film manufacturers, carbon material and high-temperature furnace equipment companies; downstream customers mainly include flexible electronics and FPC manufacturers, lithium battery and supercapacitor companies, sensor and EMI shielding material manufacturers, and aerospace and high-end equipment manufacturing customers. In 2024, the global market price for carbonized polyimide film was \$26,235 per ton, with sales of approximately 62,445 tons, global production capacity of around 63,000-65,000 tons, and an industry profit margin of 15-18%.

The global Carbonized Polyimide Film market size was estimated at USD 1638.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
