Abstracts

Carbonless continuous paper, also known as NCR paper (No Carbon Required), is a specialized multi-part paper form designed for creating duplicate or triplicate copies without the use of carbon paper inserts. It consists of multiple sheets coated on the back with micro-encapsulated dye or reactive clay and on the front with a developer; when pressure is applied during writing or printing, the capsules rupture, causing a chemical reaction that produces an image on the subsequent sheet. This self-contained duplication system is widely used in applications such as invoices, receipts, delivery notes, and other business forms where instant copies are required, offering efficiency, reliability, and a reduction in handling compared to traditional carbon-based methods.

The global Carbonless Continuous Paper market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.50% during the forecast period.
