Abstracts

Carbonyl oxysulfide (COS) is a colorless, flammable gas with the chemical formula $O=C=S$, structurally analogous to carbon dioxide (CO_2) but with sulfur replacing one oxygen atom. It occurs naturally in volcanic gases, marshlands, and oceans, and is also produced industrially as a byproduct in processes like coal gasification, petroleum refining, and certain chemical syntheses. COS plays a significant environmental role as the predominant source of stratospheric sulfate aerosol particles, which influence the Earth's radiation balance and ozone chemistry. Industrially, it serves as an intermediate in the synthesis of organic sulfur compounds and is used in some specialty chemical applications, though its handling requires caution due to toxicity and flammability risks.

The global Carbonyl Oxysulfide (Cos) market size was estimated at USD 42.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
