Report Overview

Carboxylate Microsphere is a specialized type of microsphere designed for various applications in the fields of chemistry, biology, and materials science. These microspheres are spherical particles with a diameter in the micrometer range, typically between 1 and 1000 micrometers. The defining characteristic of carboxylate microspheres is their surface functionalization with carboxylic acid groups (-COOH). This functionalization allows for a high degree of reactivity and versatility, enabling the microspheres to be used in a wide range of applications, such as drug delivery systems, catalyst supports, and immobilization of enzymes or other biomolecules. The carboxylate groups can also facilitate the attachment of other functional groups or molecules through chemical reactions, making these microspheres valuable in the creation of complex, multifunctional materials.
