Abstracts

Carboxymethyl Guar (CMG) is a chemically modified derivative of guar gum, produced through the carboxymethylation of guar galactomannan, resulting in an anionic polysaccharide with enhanced solubility, viscosity, and stability compared to its native form; it is widely utilized as a rheology modifier, thickener, and stabilizer across various industries, including oil and gas (as a fracturing fluid additive in hydraulic fracturing operations), food and beverages (for texture improvement and moisture retention), pharmaceuticals (as a binder and disintegrant in tablet formulations), cosmetics and personal care (in lotions, shampoos, and creams for emulsification and consistency), textiles (as a printing thickener and sizing agent), and paper manufacturing (for improved sheet formation and retention aids), owing to its excellent water-binding capacity, shear-thinning behavior, and biocompatibility.
