Abstracts

Cardiac autonomic control refers to the complex regulatory system governed by the autonomic nervous system that modulates heart rate, contractility, and vascular tone to maintain cardiovascular homeostasis, primarily through the balanced interplay of sympathetic and parasympathetic (vagal) inputs; this physiological mechanism is critical for adaptive responses to stress, exercise, and environmental changes, and its assessment—often via heart rate variability (HRV), baroreflex sensitivity, or other biomarkers—serves as a key indicator of cardiovascular health, autonomic dysfunction, and risk for conditions such as arrhythmias, hypertension, heart failure, and sudden cardiac death.

The global Cardiac Autonomic Control market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
