Abstracts

Cardiac bio implant devices are medical implants derived from biological materials, such as porcine or bovine tissues, or engineered from human donor tissues, designed to repair or replace damaged or diseased cardiac structures, including heart valves, patches for congenital defects, vascular grafts, and annuloplasty rings. These devices are distinguished from mechanical implants by their biocompatibility and capacity for tissue regeneration and integration, reducing the need for lifelong anticoagulation therapy while offering hemodynamic performance closer to that of native tissue. The market encompasses a range of products used in surgical interventions for conditions like valvular heart disease, ischemic heart disease, and structural heart defects, with applications spanning transcatheter and open-heart procedures. Advancements focus on improving durability, reducing immunogenicity, and enhancing ease of implantation, positioning these devices as critical solutions in cardiac care, particularly for patient populations unsuitable for mechanical alternatives.

The global Cardiac Bio Implant Devices market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
