Report Overview

A cardiac catheterization lab, also known as a “cardiac cath lab,” is a special hospital room where doctors perform minimally invasive tests and procedures to diagnose and treat cardiovascular disease. The procedures performed in a cardiac cath lab almost always involve tiny, flexible tubes, called catheters, which can be use instead of surgery, to access the heart and blood vessels. A cath lab has special imaging equipment used to see the arteries and check how well blood is flowing to and from the heart. This information helps the care team to diagnose and treat blockages and other problems in the arteries.
