Report Overview:

Cryoablation catheters are used in procedures where tissue destruction needs to be performed, such as tumor ablation and the treatment of cardiac arrhythmias. They consist of a hollow lumen through which one or more electrodes can pass. A liquid coolant is circulated throughout this tube for cooling purposes with the electrode tip being brought into contact with body tissues via a thermal-sensitive sheath. This facilitates cryogenic necrosis by focused application of low temperatures at specific sites within the heart muscle that have been mapped out before any surgical procedure.

The Global Cardiac Cryoablation Ablation Catheter Market Size was estimated at USD 580.20 million in 2023 and is projected to reach USD 936.16 million by 2029, exhibiting a CAGR of 8.30% during the forecast period.
