Abstracts

Cardiomyopathy devices refer to a specialized category of implantable and external medical technologies designed to manage, monitor, and treat various forms of cardiomyopathy—a disease of the heart muscle that impairs its ability to pump blood effectively. This includes implantable cardioverter-defibrillators (ICDs) for preventing sudden cardiac death, cardiac resynchronization therapy (CRT) devices to improve heart synchronization, ventricular assist devices (VADs) for mechanical circulatory support in advanced heart failure, and wearable or external monitors for continuous cardiac function assessment. These devices aim to stabilize cardiac performance, reduce symptoms, extend survival, and improve quality of life for patients across both non-ischemic and ischemic cardiomyopathy subtypes, often integrating with pharmacological and lifestyle interventions as part of a comprehensive treatment strategy.

The global Cardiomyopathy Devices market size was estimated at USD 1246.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
