Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cardioplegic Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Cardioplegic solution is a liquid that is infused into the heart through the coronary artery or coronary sinus during open heart surgery, which acts as a chemical induction and causes the heart to stop beating quickly. It is mainly used to temporarily stop the heart during cardiac surgery so that doctors can perform surgical operations. The main components of cardioplegic solution include crystalloid cardioplegic solution, blood-containing cardioplegic solution and fluoride cardioplegic solution. Among them, the crystalloid cardioplegic solution is represented by the St. Thomas Hospital cardioplegic solution, while blood-containing cardioplegic solution and fluoride cardioplegic solution (such as fluorocarbon cardioplegic solution, commonly used perfluorotributylamine Fluosol-DA) are also used clinically. In recent years, there has been a trend in the clinical application of diluted blood cardioplegic solution.

The global Cardioplegic Solution market size was estimated at USD 237.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
