Report Overview

Cardiac Catheterization is the insertion of a catheter into a chamber or vessel of the heart. This is done both for diagnostic and interventional purposes. Subsets of this technique are mainly coronary catheterization, involving the catheterization of the coronary arteries, and catheterization of cardiac chambers and valves of the cardiac system.

The global healthcare industry has witnessed healthy growth in the past couple of years on account of innovative technologies that have helped boost efficiency through better diagnosis. This, alongside the rising number of cardiology procedures being carried out across the world, is likely to propel the global market for cardiology IT workflow solutions significantly. In fact, these days, both practicing physicians and hospitals demand cardiology IT workflow solutions, which, among other things, enable fast and hassle-free access to patient data and effective management of the nurses' various activities. Alerts and messages sent instantaneously enables the cardiology department to intervene immediately. All these improve the medical procedures and processes, eventually benefitting the patients the most.
