Abstracts

X-ray inspection systems for cargo containers have now become a standard feature in many ports. This rapid adoption has been accelerated by the needs of port security, but made practical by the systems' unique ability to non-destructively penetrate entire containers and generate images of the contents in just a few seconds. Even at this large scale, the resulting images are comparable to those obtained through traditional baggage scanning at airports and capable of identifying objects smaller than a baseball. Consequently, these systems are commonly employed for manifest verification and contraband interdiction in a variety of environments.

The global Cargo Container X Ray Inspection Systems market size was estimated at USD 464.98 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -4.60% during the forecast period.
