Report Overview:

X-ray inspection systems for cargo containers have now become a standard feature in many ports. This rapid adoption has been accelerated by the needs of port security, but made practical by the systems' unique ability to non-destructively penetrate entire containers and generate images of the contents in just a few seconds. Even at this large scale, the resulting images are comparable to those obtained through traditional baggage scanning at airports and capable of identifying objects smaller than a baseball. Consequently, these systems are commonly employed for manifest verification and contraband interdiction in a variety of environments.

The Global Cargo Container X-ray Inspection Systems Market Size was estimated at USD 487.45 million in 2023 and is projected to reach USD 367.47 million by 2029, exhibiting a CAGR of -4.60% during the forecast period.
