Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carrier Supported Foil for PCB competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carrier supported copper foil is copper foil laminated or temporarily bonded to a polymer carrier (e.g., PET or polyimide) to provide mechanical support and dimensional stability for ultra-thin foils. The carrier eases handling, accurate alignment, and roll-to-roll processing during etching, plating, and lamination in PCB manufacturing. Carriers may be peelable or permanently bonded and are used in HDI, flexible, and rigid-flex circuits. In 2024, global Carrier Supported Foil for PCB production reached approximately 56.32 million Sqm, with an average global market price of around US\$12.4 per Sqm. From a competitive perspective, the global Carrier Supported Foil for PCB market is currently dominated by Japan's Mitsui Kinzoku, with an annual production capacity of approximately 50 million square meters, followed by Circuit Foil Luxembourg S.a.r.l., with an annual capacity of approximately 10 million square meters. On July 29, 2025, Defu Technology signed an agreement with Volta Energy Solutions S.r.l. to acquire 100% of Copper Foil Luxembourg for approximately \$174 million. Volta is a subsidiary of Solus. Gross profit margins are extremely high in the industry, exceeding 60%, with even higher margins for ultra-thin products (1.5-3µm). Carrier Supported Foil for PCB typically has a much higher gross profit margin than conventional PCB copper foil due to its more complex production process, higher added value, and wider application in high-end electronic products. In the cost structure of Carrier Supported Foil for PCB, raw materials account for the largest proportion, approximately 40-50%, followed by processing costs, approximately 30-40%. From the perspective of the industrial chain, the upstream of Carrier Supported Foil for PCB is electrolytic copper, resin substrates, chemicals, etc.; the downstream is manufacturers

of IC packaging substrates, flexible circuit boards, HDI substrates, etc., and representative manufacturers include Avary Holding, Shennan Circuits, AKM Meadville, Samsung Electro-Mechanics, etc.

The global Carrier Supported Foil for PCB market size was estimated at USD 698.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
