Abstracts

Carton flow racking system is a dynamic storage solution designed using the principle of gravity. It is widely used in warehouses and distribution centers to improve picking efficiency and space utilization. The shelves are set at an inclined angle, and the goods are placed on rollers or slides. Gravity automatically slides from the loading end to the picking end to ensure first-in-first-out inventory management. This system reduces the number of channels and increases storage density. It is particularly suitable for storing large quantities of similar goods and short-term storage needs. Goods automatically slide to the picking location, reducing operators' walking distance and searching time, thereby improving picking speed and accuracy.

The global Carton Flow Racking System market size was estimated at USD 675.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
