Abstracts

A cartoning packaging system is an automated or semi-automated machinery solution designed to erect, load, and seal cartons or boxes used for product packaging across various industries, including pharmaceuticals, food and beverage, cosmetics, consumer goods, and electronics. These systems handle a range of carton styles?such as tuck-end, glue-end, and four- or six-corner designs?and are capable of integrating with upstream and downstream equipment like product feeders, leaflet inserters, and case packers to form a complete packaging line. Key functionalities typically involve carton forming from flat blanks, precise product loading (manually or via robotic arms), and final sealing through adhesive, tucking, or heat-sealing methods, with advanced systems offering features like vision inspection, barcode verification, and data tracking for quality control and traceability. The primary objective is to enhance packaging speed, accuracy, and efficiency while reducing labor costs and minimizing errors in high-volume production environments.

The global Cartoning Packaging System market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
