Abstracts

In 2024, global Cash Recycling Machine production will reach 13.01 million units, with an average selling price of US\$599.86 per unit and a gross profit margin of approximately 30.28%. A cash recycling machine is an automated financial device that integrates cash deposits and withdrawals, non-cash transactions, and fund circulation. Its core feature is the instant recycling of deposited cash through an internal system. This means that customer deposits can be used directly for subsequent withdrawals, eliminating the need for manual bank clearing. This feature optimizes cash allocation efficiency and significantly reduces bank cash replenishment frequency and labor costs. A cash recycling machine is a self-service terminal that allows customers to deposit and withdraw cash. In the future, cash recycling machines will gradually replace ATMs. In North America market, the key players of Cash Recycling Machine include NCR and Diebold Nixdorf, etc. The top two players hold a share over 45%. In terms of product type, CRM Full Outsourcing is the largest segment, occupied for a share of about 60%, and in terms of application, Off-Bank Mode has a share about 51.5 percent. Trends: The number of cash-recycling ATMs will grow exponentially over the next few years. Cash-recycling ATMs are the fastest-growing ATM type globally. The number of non-recycling ATMs is expected to continue declining. Cash-recycling ATMs offer a wide range of banking services and reduce customer reliance on branches. This allows banks and other financial institutions to focus on the development and operation of their core businesses. The time and effort required to transfer physical banknotes to machines during cash-in-transit (CIT) pickups has been significantly reduced, accelerating consumer demand for cash-recycling ATMs. North America is Slower Than Other Regions: Cash-recycling ATMs remain an emerging technology with limited adoption in the United States, Canada, and parts of Latin America. While the United States is slower to deploy cash-recycling ATMs than other regions, the growth in cash deposits is paving the way for more cash-recycling ATMs in the country. CRM Outsourcing Services

Accelerate:As banks seek to reduce costs and improve efficiency, ATM outsourcing has become a crucial tool for providing consumers with reliable self-service options. Globally, 88% of FLM and SLM outsourcing has been implemented. Outsourcing is particularly attractive to small and medium-sized banks. The move from single-source FLM outsourcing to SLM outsourcing is progressing towards full-process managed services. Outsourcing is particularly attractive to small and medium-sized banks, but it will become a necessity for banks of all sizes.

The global Cash Recycling Machine market size was estimated at USD 7804.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
