Abstracts

A casing advance system is a critical piece of equipment in the oil and gas drilling industry, designed to efficiently insert and cement well casing strings into a borehole while simultaneously drilling or reaming ahead. This integrated technology combines the functions of a top drive and a casing running tool, allowing for continuous rotation and circulation during casing operations, which enhances wellbore stability, reduces non-productive time, and minimizes the risk of stuck pipe. By enabling operators to drill and case a well in a single trip under certain conditions, these systems improve operational safety, lower overall drilling costs, and support the construction of more complex well geometries, particularly in challenging environments such as deepwater, extended-reach, or geopressured formations.

The global Casing Advance System market size was estimated at USD 980.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
