Report Overview:

Cast AlNiCo magnets are typically made by pouring molten aluminum, nickel, and cobalt into a mold and solidifying the alloy under high pressure. The resulting cast magnets can then be heat-treated to enhance their magnetic properties.

AlNiCo magnets have high magnetic strength but relatively low Curie temperatures compared to other types of rare-earth magnets. This means they can lose their magnetic properties at relatively low temperatures, which can limit their use in certain high-temperature applications.

The Global Cast AlNiCo Magnet Market Size was estimated at USD 1086.31 million in 2023 and is projected to reach USD 1733.43 million by 2029, exhibiting a CAGR of 8.10% during the forecast period.
