## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cast Iron Rolls competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cast iron rolls are key rolling components made primarily from gray cast iron or ductile iron, offering excellent wear resistance, thermal crack resistance, and dimensional stability. They are widely used in work rolls and backup rolls for hot strip mills, section mills, and medium/small bar rolling mills. The manufacturing process includes molten iron smelting, centrifugal or static casting, heat treatment, and precision machining. Major upstream raw materials include pig iron, scrap steel, and alloying elements such as chromium, nickel, and molybdenum, while downstream customers consist of steel producers, rolling mill equipment manufacturers, and roll refurbishment service providers. In 2024, the global production capacity of cast iron rolls was about 960,000 tons, with sales of approximately 780,000 tons, an average price of around USD 1,350 per ton, and a gross margin ranging from 15% to 30%, influenced notably by fluctuations in raw material costs and cyclical steel industry demand.

The global Cast Iron Rolls market size was estimated at USD 1053.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Cast Iron Rolls market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
