Abstracts

Cast steel gate valves are industrial flow control devices designed for high-pressure and high-temperature applications, utilizing a gate mechanism that moves perpendicular to the flow path to either fully open or fully close the fluid passage. These valves are manufactured from cast steel alloys, such as carbon steel or stainless steel, which provide superior mechanical strength, corrosion resistance, and durability compared to cast iron or bronze alternatives. They are engineered for bidirectional flow isolation and are commonly used in critical sectors where reliability under demanding conditions is essential, including oil and gas pipelines, power generation plants, chemical processing facilities, water treatment systems, and marine applications. Their design prioritizes minimal pressure drop when fully open and a tight seal when closed, making them suitable for systems handling steam, hydrocarbons, abrasive slurries, and other aggressive media.

The global Cast Steel Gate Valves market size was estimated at USD 1380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
