Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Castables and Refractory Bricks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Castables are a loose powder/slurry of refractory materials, made from refractory aggregates (such as corundum, silicon carbide, and magnesia particles) and powders, along with binders (such as water glass, phosphates, and cement) and additives. Liquid (water or a specialized solvent) is added proportionally and mixed thoroughly at the construction site. The mixture is then poured, vibrated, or sprayed into the equipment's lining molds, where it cures and solidifies to form a monolithic refractory layer. Refractory bricks are prefabricated, block-shaped refractory materials made primarily from refractory raw materials (such as clay, high-alumina bauxite, and magnesia). These materials are mixed, pressed, formed (standard or special-shaped), and then sintered at high temperatures. These prefabricated bricks have a fixed size and regular shape, allowing for direct masonry construction. In 2024, the global output of castable and refractory bricks will reach 1.52 million tons, and capacity is about 2.2 million tons, with an average selling price of US\$620 per ton and the gross margin is about 22.13%. The upstream suppliers of castable and refractory bricks primarily include suppliers of natural minerals, synthetic materials, and auxiliary materials. Natural minerals include refractory clay, high-bauxite, magnesium ore, and chromium ore; synthetic materials include alumina, magnesium oxide, zirconium oxide, and silicon carbide; and auxiliary materials include binders, plasticizers, and antioxidants. The quality and supply stability of these raw materials directly impact the production cost and product quality of castable refractory bricks. Castable refractory bricks are widely used downstream in industries such as steel, cement, glass, ceramics, petrochemicals, and electric power, where they are used for linings and insulation in high-temperature

equipment such as furnaces. The steel industry is the largest consumer market, followed by the cement industry. Changes in demand in downstream industries directly impact the market demand and price trends for castable refractory bricks.

The global Castables and Refractory Bricks market size was estimated at USD 945.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
