Abstracts

Casting leather release paper is a type of paper used in the production of synthetic leather or leather-like materials. It is applied during the casting process to prevent the synthetic leather material from sticking to molds or other surfaces. Typically coated with a release agent or a non-stick layer, this paper ensures that the leather-like material can be easily removed from the mold without damaging the surface or compromising the texture. This type of release paper is particularly important in the manufacturing of artificial leather products, as it helps maintain smoothness, quality, and consistency in the final product. It is commonly used in the production of automotive interiors, upholstery, fashion goods, and other applications requiring durable, flexible, and aesthetically appealing leather alternatives.

The global Casting Leather Release Paper market size was estimated at USD 469.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
