Abstracts

Casting simulation software is a specialized category of computer-aided engineering (CAE) tools used to predict and visualize the behavior of molten metal during the casting process, enabling manufacturers to identify and resolve potential defects?such as porosity, shrinkage, cold shuts, and misruns?before physical production begins. These programs employ advanced numerical methods, including finite element analysis (FEA) and computational fluid dynamics (CFD), to model filling, solidification, cooling, stress development, and microstructure evolution, thereby optimizing mold design, gating systems, and process parameters to improve yield, reduce scrap rates, and shorten development cycles.

The global Casting Simulation Software market size was estimated at USD 255.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Casting Simulation Software market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
