Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Catalyst for Methanol-to-Olefins Conversion competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Catalysts for methanol-to-olefins (MTO) conversion are specialized materials, typically zeolite-based, designed to facilitate the transformation of methanol into light olefins such as ethylene and propylene through a complex series of dehydration, methylation, and cracking reactions. Common catalysts include SAPO-34, ZSM-5, and modified variants, which provide shape-selective microporous structures and active acid sites crucial for controlling product distribution and suppressing unwanted byproducts like aromatics or coke. These catalysts operate effectively at temperatures around 400-500°C and are vital for coal-to-olefins (CTO) and natural gas-to-olefins (GTO) technologies, enabling non-petroleum routes for producing essential petrochemicals.

The global Catalyst for Methanol-to-Olefins Conversion market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
