Abstracts

Catalyst electron donors refer to substances that can provide electrons in catalytic reactions, usually called "electron donors" or "electron donors". This material promotes chemical reactions by providing electrons to catalysts or reactants, especially in redox reactions and hydrogenation reactions. Electron donors can effectively reduce the activation energy of the reaction, increase the reaction rate and efficiency. They can help generate more active intermediates in the catalytic process, accelerate the reaction and improve the selectivity of the product.

The global Catalyst Electron Donor market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
