Abstracts

Catalytic gas detectors are safety devices designed to detect the presence of combustible or flammable gases in the air by utilizing a catalytic bead sensor, which operates on the principle of oxidation: when a combustible gas comes into contact with a heated catalyst (typically platinum), it oxidizes, causing a change in temperature and electrical resistance in the sensor that is measured and converted into a gas concentration reading, providing early warning of potential fire or explosion hazards in environments such as industrial plants, oil and gas facilities, mining operations, and confined spaces where leaks of gases like methane, propane, or hydrogen may occur.

The global Catalytic Gas Detectors market size was estimated at USD 325.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.15% during the forecast period.
