Abstracts

Catenary Anchor Leg Mooring (CALM) Buoys philosophy consists of a tanker mooring securely to a single buoy in open waters offshore. After which the free ends of floating hoses connected to the buoy are connected to the tanker and product is pumped through the hoses, buoy, subsea risers, manifolds and subsea pipeline. Either from the tanker to onshore storage or vice versa, depending on if it is import or export facility. calm buoy system is typically used nearshore, to negate the need for larger marine mooring infrastructure such as ports, jetties and marine loading arms. It also offers an improvement over the fixed position Multiple Buoy Mooring (MBM) methods, in which tankers are typically more adversely affected by loads from wind and waves. Calm buoy mooring system are also used further offshore, in deep waters, to facilitate the transfer of product between floating production facilities and tankers. In these instances, the buoys have a different design and are moored on position with composite legs, often containing high-tech synthetics and steel wire rope.
