Report Overview

Metal packaging for the food industry is considered safe, which is one of the main factors supporting its growth in the market. Environmentalists believe that aluminum metal cans can be easily stored in refrigerators and ovens, and are more environmentally friendly than other packaging containers. As far as the containers are concerned, repeated recycling reduces environmental pollution. As far as the materials used are concerned, aluminum can be repeatedly used. The use of effective conservation of resources to maintain the global environment, while other packaging containers such as the prevailing plastic, PET materials, are derived from petroleum, the continuous extraction of oil will cause the exhaustion of resources.
