The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Catheter Tipping Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The catheter flanging machine is a device dedicated to the end molding of medical catheters. It is mainly used to heat and soften the end of the catheter, and then press it into a specific shape through a mold, such as flanging, sealing, cone, flare and other structures. The equipment usually uses high-frequency induction heating, resistance heating or hot air heating to shape the catheter material (such as PVC, TPU, PEEK, etc.) in the mold to ensure its dimensional accuracy, surface finish and structural stability. The flanging machine is widely used in the manufacturing process of disposable catheters, gastric tubes, endotracheal tubes, hemodialysis tubes and other products. It is one of the indispensable key equipment in the medical catheter production line. Its advantages are high efficiency, high consistency, low energy consumption and high degree of automation, which are suitable for mass production and customized processing.

The global Catheter Tipping Machine market size was estimated at USD 308.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
