Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cathode Lithium Supplement Additives competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cathode lithium supplement additives are additives used to enhance the performance of lithium-ion batteries, typically incorporated during the cathode slurry preparation process. They release lithium ions to compensate for the irreversible lithium loss during the initial charge-discharge cycle, thereby improving the first-cycle coulombic efficiency and extending battery life. Common cathode lithium supplement additives include lithium-rich compounds, conversion reaction-based nanocomposites, and binary lithium compounds. These materials offer high safety and do not require changes to existing battery manufacturing processes, making them highly promising for widespread application in the battery industry. In 2024, global cathode lithium supplement additives production reached approximately 15 kilotons, with an average global market price of around US\$ 35714 per ton.

The global Cathode Lithium Supplement Additives market size was estimated at USD 536.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.00% during the forecast period.
