Abstracts

CCD line scan cameras are imaging devices based on Charge-Coupled Device (CCD) technology, utilizing single-row or multi-row pixel sensors to capture images line by line. Unlike area scan cameras, line scan cameras construct complete two-dimensional images by continuously moving either the object or the camera, making them ideal for high-speed, continuous inspection and imaging applications. CCD line scan cameras offer high resolution, low noise, high dynamic range, and excellent light sensitivity, and are widely used in industrial inspection, print quality control, semiconductor inspection, food sorting, spectroscopy, and remote sensing.

The global CCD Line Scan Cameras market size was estimated at USD 492.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
