## Abstracts

CCD vision positioning laser marking machine is a device that combines CCD (charge coupled device) camera and laser marking technology. The image of the workpiece to be processed is collected in real time by the CCD camera, and the target position is accurately located with the help of the visual system, so as to ensure that the laser beam can accurately mark the predetermined area. The system can automatically identify the shape, size and position of the workpiece, overcome the shortcomings of the traditional laser marking machine that relies on manual or mechanical adjustment for workpiece positioning, and achieve higher automation, accuracy and efficiency. CCD vision positioning laser marking machine is widely used in precision manufacturing, electronic product identification, automotive parts marking, QR code and barcode engraving and other fields.

The global CCD Vision Positioning Laser Marking Machine market size was estimated at USD 1525.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
