Abstracts

CCTV drainage surveys utilize remotely controlled cameras for non-invasive inspections of underground drainage systems. By inserting high-resolution cameras into sewer pipes, technicians can observe in real time the pipe's structural condition, blockages, cracks, tree root intrusion, and abnormal connections. This service is widely used for drainage system health checks during urban infrastructure maintenance, pre-construction surveys, environmental assessments, and property transactions. This technology, often combined with pipe locating systems, CAD drawings, and structural assessment standards (such as the WRc Drainage Condition Classification Manual), produces detailed video records, defect reports, and repair recommendations, making it an indispensable tool for modern urban drainage system management.

The global CCTV Drain Survey Services market size was estimated at USD 780.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
