CD recorders can record CDs according to different needs. A compact disc is a portable storage medium that can be used to record, store and play back audio, video and other data in digital form. A CD works by focusing a 780 nanometer wavelength semiconductor laser onto a single track of the disc. As the disc rotates, the laser beam measures differences in the way light is reflected off the polycarbonate layer on the bottom of the disc, converting it to sound. These devices will convert your music from analog to a digital format and store it on a CD for you.
