### Report Overview:

Cefotaxime sodium is the sodium salt form of cefotaxime, a beta-lactam, third-generation cephalosporin antibiotic with bactericidal activity. Cefotaxime sodium binds to and inactivates penicillin-binding proteins (PBP) located on the inner membrane of the bacterial cell wall. Inactivation of PBPs interferes with the cross-linking of peptidoglycan chains necessary for bacterial cell wall strength and rigidity. This results in the weakening of the bacterial cell wall and causes cell lysis. Compared to the second and first generation cephalosporins, cefotaxime sodium is more active against gram-negative bacteria and less active against gram-positive bacteria.

The Global Cefotaxime Sodium API Market Size was estimated at USD 106.42 million in 2023 and is projected to reach USD 101.41 million by 2029, exhibiting a CAGR of -0.80% during the forecast period.
