Abstracts

Ceiling-mounted X-ray systems are advanced medical imaging devices suspended from the ceiling, offering enhanced maneuverability, space efficiency, and workflow optimization in clinical settings such as hospitals, diagnostic centers, and specialized care units. These systems integrate X-ray tubes, detectors, and positioning arms into a unified overhead structure, enabling precise, multidirectional adjustments for capturing images from various angles without requiring floor space for bulky equipment. Designed to support a range of examinations?from routine radiography to complex surgical and trauma imaging?they often feature motorized movement, automated positioning, and compatibility with digital radiography (DR) or computed radiography (CR) technologies, improving imaging speed, dose management, and integration with hospital information systems (HIS) and picture archiving and communication systems (PACS).
