Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Celestite competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of celestite concentrate reached approximately 310,000 tonnes, with an average selling price of \$1,126 per tonne. Celestite is a light blue to colorless mineral primarily composed of strontium sulfate, serving as the principal industrial source for extracting strontium. Its processed core products, strontium carbonate and strontium nitrate, are widely used in manufacturing glass shells for televisions and display devices to absorb X-rays, producing magnetic materials, creating the red illuminant in pyrotechnics and signal flares, and formulating drilling mud in oil and gas exploration. It is an indispensable key mineral material in the electronics, chemical, and defense industries. The current celestite market demonstrates relatively stable supply-demand dynamics, though it remains vulnerable to export policies of key producing nations and cyclical fluctuations in downstream sectors. Long-term demand is primarily sustained by the electronics glass and ceramic magnet industries, while short-term consumption varies with oil and gas exploration activities. The market features high supply concentration, with global production capacity heavily concentrated in a few resource-rich countries, making supply chain reliability a persistent concern for downstream manufacturers. Future development trends will be closely tied to breakthroughs in new energy and advanced materials, particularly potential applications in modifying lithium iron phosphate battery cathodes. Meanwhile, increasing environmental pressures are driving the industry toward cleaner mining and processing technologies, though risks from resource nationalism and geopolitical tensions continue to pose challenges to global trade flows.

The global Celestite market size was estimated at USD 349.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Celestite market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
