Report Overview

Cell bank production and storage is the process of creating and storing a large quantity of cells, such as animal cells, plant cells, or stem cells. Cell banks are used for a variety of purposes, including research, drug development, and cell therapy. To produce a cell bank, cells are first cultured in a laboratory. Once the cells have grown to a sufficient number, they are harvested and cryopreserved, which is a process of freezing and storing the cells at very low temperatures. Cryopreserved cells can be stored for many years, and they can be thawed and used when needed.
