Abstracts

Cell-based regenerative therapy refers to a medical approach that utilizes the unique properties of living cells to promote tissue repair, regeneration, and healing within the body. This therapeutic strategy involves the use of cells, often derived from the patient"s own body or from other sources, to replace damaged or dysfunctional cells, stimulate the body"s natural regenerative processes, and ultimately restore normal tissue function.Continued progress in understanding stem cell biology, including induced pluripotent stem cells (iPSCs), has been a driving force. Researchers are exploring ways to harness the regenerative potential of stem cells for various therapeutic applications.
