### Report Overview

Cell characterization assays kits are used for quantitative and qualitative analysis of cell cultures and cell line by differentiating cell populations, which work as a biomarkers for particular cell population subgroups. The cell characterization assays kits empower analytical research in respective domains, including cancer, immune response biology and autoimmune disorders using murine and human samples. Multi-drug resistance (MDR) is one of the widely known problems in oncology. The cell characterization assays kits comprise specific comprehensive media and tri-layer-based protocols for analyzing in-vitro focused distinction experiment in every germ layer, reproducibly and evidently stating trilineage differentiation. The spontaneous cell separation and differentiation offers advantage in immunohistochemistry and plays an important role in cell characterization assays kits. The cell characterization assays kits offer primitive benefit in selection of biomarkers for further analysis according to the nature of cell sample.
