## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cell Cryopreservation Bags competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global cell cryopreservation bags production reached approximately 25,000,000 units, with an average global market price of around US\$ 25 per unit. Cell cryopreservation bags are specialized containers used for the safe and long-term preservation of living cells at ultra-low temperatures. Typically made from biocompatible materials (such as multi-layer composite EVA (ethylene vinyl acetate) films), they offer excellent cryogenic resistance, sealing, and sterility, effectively preventing sample contamination and ice crystal damage. They are widely used in fields such as cell therapy, biopharmaceuticals, and stem cell banks. The upstream of the cell cryopreservation bag industry chain mainly includes suppliers of medical polymer materials (such as EVA particles), sterile packaging materials, valve interfaces and other accessories; the midstream is the research and development, production and manufacturing (including film blowing, bag making, sterilization, testing and other links) and packaging of cryopreservation bags, and participants include internationally renowned biotechnology companies and local manufacturers; the downstream is widely used in cell therapy (such as CAR-T), gene therapy, biopharmaceutical production, stem cell banks, scientific research institutes and hospitals, and its development is closely linked to the global biomedicine R&D investment and the expansion of the cell therapy market.

The global Cell Cryopreservation Bags market size was estimated at USD 627.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
