Report Overview

Cell culture insert plates are specialized laboratory tools used in cell biology and tissue engineering for conducting in vitro experiments. They provide a versatile system for growing cells and studying their behavior under different conditions, particularly when simulating in vivo environments or creating co-culture systems. Cell culture inserts and plates provide a permeable support for cell growth, allowing cells access to media and nutrients from the apical and basolateral sides. This feature more closely mimics the in vivo cellular environment of cells compared to conventional seeding on polystyrene plates.
